Subject: Acknowledgement of collaboration

This is being acknowledged that STATA IT LIMITED has collaborated with Tamanna Nazmin, on her project titled 'Face mask detection-based door lock system' from 8 April 2021-1 July 2021.

The project focused on identifying a face mask on an individual approaching a door and allowing/preventing opening the door based on detection of the facemask. During the collaboration, she has done the project to the 'Raspberry Pi' using the TensorFlow Lite algorithm. She was a brilliant student and a dedicated professional, during her time here, she managed to solve a lot of bugs and problems She had been very creative, hardworking, and resourceful. I wish her all the very best with her future endeavors.

Sincerely,

Shahriar Tasnim

 R&D Project Engineer
